Event Search & Discovery

Sales Agent

Screen 1- Event Search

As a sales agent, I want to quickly search for events by name, artist, or venue so that I can find the right event for a walk-in or phone customer in under 10 seconds, minimizing wait time and maximizing sales throughput during peak hours.

- ACCEPTANCE CRITERIA
- ☐ Search input auto-focused on page load, no click needed
- ☐ Auto-suggest dropdown after 2 characters with 200ms debounce
- ☐ Event cards show: name, date/time, venue, price, availability badge
- ☐ Badges: green (Available), amber (Low Stock ≤ 5), red (Sold Out)
- ☐ Sold-out events at 50% opacity, red badge, not clickable
- ☐ Category chips filter instantly without page reload
- ☐ Date filter: Today, This Week, This Weekend, This Month, All
- ☐ Results count updates dynamically above grid
- ☐ Empty state: centered message when no results match
- ☐ Click available card → navigates to Screen 2
- ☐ Search state preserved on back navigation

DESIGN RATIONALE

Search bar is the hero, agents use it 50+ times daily. Auto-focus saves one click per transaction. Category chips enable lateral navigation for “I want a show tonight” requests. Green/amber/red badges give instant visual signal without reading text.

- EDGE CASES
- No results: “No events found for [query]. Try different search or browse categories.”

API timeout: skeleton cards (3), error toast after 5 seconds

Special characters in search input sanitized to prevent XSS

Checkout & Payment

Sales Agent

Screen 3- Checkout

As a sales agent, I want to capture customer details and process payment in a single screen so I can complete the sale without switching tools, keeping wait time under 60 seconds from “ready to pay” to “done.”

- ACCEPTANCE CRITERIA
- ☐ Customer form: First + Last Name (2-col), Email, Phone (full width)
- ☐ “Search existing customer” by email or phone for returning buyers
- ☐ Existing found: auto-populate fields, show “Returning customer” badge
- ☐ Payment: 3 card-style options Credit Card, Cash, Invoice
- ☐ Credit Card default selected with gold border
- ☐ CC fields: number (mask), expiry MM/YY, CVV, name on card
- ☐ Cash: “Collect \$570.00 at counter” display
- ☐ Invoice: send to email, toggle immediate vs. net-30
- ☐ Summary sidebar read-only, finalized event + tickets + total
- ☐ “Complete Sale- \$570.00” gold CTA (48px) with total inline
- ☐ CTA disabled until all fields validated
- ☐ Loading: spinner replaces CTA text during payment (1-3s)

DESIGN RATIONALE

Single-screen checkout eliminates transitions at the critical moment. Card-style payment (not dropdown) shows all options at once. Cash + Invoice reflect POS reality. “Search existing customer” implies CRM integration, shows systemic thinking.

- EDGE CASES
- Payment declined: inline error, red border, form stays populated

Email invalid: real-time error “Please enter a valid email”

Network error: retry button + connection error message

Session timeout: warn at 5 min idle, auto-save cart

Duplicate prevention: disable CTA after first click, show spinner

US-02

Seat Selection & Cart

Sales Agent

Screen 2- Seat Selection

As a sales agent, I want to view available seats by section, type, and price so I can help the customer choose the best option for their budget, with a real-time total reflecting all-in pricing and zero hidden fees.

- ACCEPTANCE CRITERIA
- ☐ Event header: name (18px bold), full date/time, venue link
- ☐ Sortable by: Price Low-High, Price High-Low, Section, Availability
- ☐ Rows: section/row, type badge (Floor/Lower/Upper/VIP), price, qty selector
- ☐ Qty selector: −/+ buttons, min 0, max = available, disabled at limits
- ☐ Selected row highlights with gold tint (5% opacity)
- ☐ Order summary sidebar updates in real-time
- ☐ Zero Service Fees green badge always visible in summary
- ☐ Total = exact final amount, no fees added later
- ☐ “Continue to Checkout” disabled until ≥ 1 seat selected
- ☐ Back to Search preserves query and filter state

DESIGN RATIONALE

List view over seating map for V1, faster to build, works across venue types. Persistent sidebar ensures agent always sees running total. All-In Pricing badge reinforces Vegas Tickets’ differentiator at the purchase decision moment.

- EDGE CASES
- Seat unavailable mid-session: amber warning, auto-remove from cart, toast

Select more than available: + disables, tooltip “Only N available”

Price changes: “Price updated” label, old price struck through

Cart exceeds limit: message shown, prevent adding more

Order Confirmation & Receipt

Sales Agent

Screen 4- Confirmation

As a sales agent, I want a clear confirmation with all order details so I can verify accuracy with the customer, issue a receipt if needed, and immediately start a new transaction with zero friction.

- ACCEPTANCE CRITERIA
- ☐ Success: green check (64px), “Sale Complete!” (24px bold), order ID
- ☐ Order ID format: VT-YYYYMMDD-XXXX
- ☐ Receipt sections: Event, Customer (“Sent” badge), Tickets, Payment, Delivery
- ☐ Email auto-sent, green “Sent” badge confirms delivery
- ☐ “Print Receipt” (secondary) + “New Sale” (primary gold)
- ☐ “New Sale” clears everything, returns to Screen 1
- ☐ All step indicators green
- ☐ No back navigation, prevents duplicate transactions

DESIGN RATIONALE

“New Sale” is primary CTA because the next action is always another transaction. No back button prevents re-processing. Receipt layout mirrors physical receipts familiar to agents.

- EDGE CASES
- Email fails: amber “Pending” badge + “Resend” link

Printer unavailable: system dialog, fallback “Save as PDF”

Browser closed: order persisted server-side
